DM BOYD

The DM Boyd Company has been in operation for over 60 years. Located in Volant Pennsylvania just north of Pittsburgh, DM Boyd produces high quality topdressing sand available both dry and damp. What sets DM Boyd apart is the ability to blend, dry, and screen virtually any combination of sand, soil, and peat to meet each customer's needs. DM Boyd is known for quality and consistency from the first load to the last. As of fall of 2009, we are starting a new chapter in the DM Boyd story. Arms Trucking has purchased the DM Boyd Company and Wendell Boyd will be heading operations at the plant overseeing all aspects of production.

Wendell will also be available for consultation to offer his expertise to our customers

PRODUCTS

20-80 Topdressing: Kiln dried USGA Spec Topdressing Sand. Available bagged and bulk.

Boyd Sand: Damp greens topdressing sand.

80-20 SP: Sand custom blended with peat. Kiln dried and screened at 1/8". All Special mixes can be blended at any ratio of sand and peat. Available bagged or bulk.

60-20-20 Reg: Sand custom blended with peat and topsoil. Kiln dried and screened at 1/8". All Regular mixes can be blended at any ratio of sand, peat, and soil. Available Bagged and Bulk.

New Construction Mix: Sand custom blended with peat and soil at any ratio the customer needs. Ideal for building greens and tees. Can also be used to topdress tees.

Greens Drainage Mix: This mix was specifically designed for internal drainage systems. This mix has been used at courses such as Oakmount CC, Fox Chapel Golf Club and many others for their greens drainage projects.

Dark Divot Mix: Wendell's famous dark divot mix is blended with sand, soil, and peat. A nutrient pack is added to insure optimum nutrient levels for quick germination. Available bagged and bulk.

Green Divot: Our divot mix dyed green. Our green divot mix is kiln dried to insure dye is baked on and will not wash off or fade in the sun.

Early Green: Our 20-80 topdressing dyed black to speed the green-up process on putting greens. Also works great to melt ice.

Fairway Topdressing Sand: Our Fairway sand is ideal for topdressing fairway turf. We have the capability to custom size our sand to match the customer's soil profile to achieve the maximum benefit.

Shot Gravel: Clean washed gravel sized for drainage in bunkers and other drainage applications.

Sports Field Mix: Our sand can be blended at any ratio of sand and peat. Soil and compost can also be added. This material can be used to build new sports fields or topdress existing fields.

Ball Diamond Mix: Clay and sand custom blended to the customer's specifications. Available in Red and Tan.
